

Monthly SLA Governance Pack

Reporting period: **August 2026**

Data source as of **24 September 2026**
5 data source files · 675 policies measured
Generated 01 Oct 2026, 15:52 · supersedes prior builds

1. Executive summary

Of the 5 Schedule 23 service levels for August 2026, **3** met target and **2 missed**: 23B UL at 97.69% against 98% and 23E at 94.29% against 98%. Of 675 policies measured, 13 missed their deadline and 177 were still open past it on 24 September 2026; those open policies sit outside the pass/fail rate but are listed as exceptions. 4 data-quality findings affect the evidence and are set out in section 4.

2. SLA Status

SERVICE LEVEL	TARGET	MET	MISSED	OPEN OVERDUE	RATE (COMPLETED)	RATE INCL. OPEN	S
23A Policy issue	≥ 97%	59	1	0	98.33%	98.33%	
23B NUL Non-unit-linked policy alterations	≥ 96%	202	5	112	97.58%	63.32%	
23B UL Unit-linked transactions	≥ 98%	127	3	65	97.69%	65.13%	
↳ 23B UL Step 1 Unit-linked EBQ transactions	≥ 98%	84	0	63	100.00%	57.14%	
↳ 23B UL Step 2 Withdrawal approvals	≥ 98%	21	1	0	95.45%	95.45%	
↳ 23B UL Step 3 Unit adjustments	≥ 98%	22	2	2	91.67%	84.62%	
23C Cancellations	≥ 96%	64	2	0	96.97%	96.97%	
23E Unrecognised EFT payments	≥ 98%	33	2	0	94.29%	94.29%	

Rate (completed) = met ÷ (met + missed), and decides pass or fail. Rate incl. open also counts policies open past their deadline at the data source date as not met. 23B UL is the combined result of Steps 1–3. Policies are counted per service record; the same policy can appear more than once.

3. Exceptions

SERVICE LEVEL	TARGET	RATE	GAP	MISSED	OPEN OVERDUE	STATUS
23B UL · Unit-linked transactions	≥ 98%	97.69%	−0.31 pp	3	65	● FAIL
↳ 23B UL Step 2 · Withdrawal approvals	≥ 98%	95.45%	−2.55 pp	1	0	● FAIL
↳ 23B UL Step 3 · Unit adjustments	≥ 98%	91.67%	−6.33 pp	2	2	● FAIL
23E · Unrecognised EFT payments	≥ 98%	94.29%	−3.71 pp	2	0	● FAIL

Where failures concentrate

Apply Yearly Contribution Increase

Transaction type

23B UL Step 1

63.16%

12 of 19 policies failed (0 missed, 12 open overdue) · 19.05% of 23B UL Step 1 failures from 12.93% of its volume

fail rate vs 42.86%
1.47× the service level

7 of 12 policies failed (0 missed, 7 open overdue) · 5.98% of 23B NUL failures from 3.76% of its volume

fail rate vs 36.68%
1.59× the service level

4. Data quality and evidence gaps

23B NUL: 112 policies open past deadline

Still open at the data source date with the deadline already passed. They are outside Rate (Completed) (97.58%) but count against Rate (incl. Open), which is 63.32%.

23B NUL

23B UL Step 1: 63 policies open past deadline

Still open at the data source date with the deadline already passed. They are outside Rate (Completed) (100.00%) but count against Rate (incl. Open), which is 57.14%.

23B UL Step 1

23B UL Step 3: 2 policies open past deadline

Still open at the data source date with the deadline already passed. They are outside Rate (Completed) (91.67%) but count against Rate (incl. Open), which is 84.62%.

23B UL Step 3

1 withdrawal has no approval workflow

No 'Workflow for Withdrawal Approval' exists on the policy before the withdrawal's last status, so Step 2 has no clock start. Listed, not scored. Policies: A90005914.

23B UL Step 2

3 policies had more than one approval workflow

The policy carried an earlier approval workflow before the one that led to the event; the latest one created before the event was used (workbook default 7).

23B UL Step 2

14 rejected EBQ policies excluded

REJECTED transactions are not processing work and are left out of 23B (workbook default 4).

23B NUL

23B UL Step 1

82 EBQ transactions are outside Mapping for 23B

Their Product + Transaction pair is not in the mapping, so they are not measured under 23B. Most frequent: Mortgage Protection / Update Role Player Contact Details (16); Mortgage Protection / Change Payer Bank Account Details (11); 360 Protect / Change Premium Payer (7).

51 23B policies have a dependency in the mapping

For example an underwriting assessment. The SLA is still measured from start to merged (workbook default 2).

23B UL Step 1

23B NUL

Mapping for 23B normalised on read

2 pairs are listed twice (each is counted once); 1 code is not upper case, e.g. 'Ul' (read as UL); 1 value has stray spaces (trimmed before matching). Matching is on Product + Transaction, ignoring case and spacing.

23B NUL

23B UL Step 1

WITHDRAWALEXT Request IDs have lost precision

514 Request IDs are longer than Excel's 15 significant digits, so their final digits are unreliable. Withdrawals are matched to workflows by policy, never by Request ID.

23B UL Step 2

50 cells hold the text 'nan'

An export placeholder for an empty value (e.g. 'Approver Role already approved' on withdrawals awaiting authorisation). Treated as blank.

Each file was identified from its own columns. Every figure in this pack is calculated by the Schedule 23 rules in SLA_Expected_Results.xlsx — business days, Irish public holidays, the 15:00 cut-off and the 48-hour cancellation limit — from the records in these files. No figure is model-generated.
